

User Guide

Generalization

This application mainly focuses on facilitating online store managements. It can currently be used on Ebay only, and is expected to be available for other sites in the future updates. The application achieves the following functions:

1. Inventory Management module: A user can build his own online inventory, items on which could be easily added, adjusted, and ended on Ebay.
 - a) Communication Module - Contacting the online store, and change the selling status dynamically.
 - b) Adjust the availability of online listing according to the specific SKU of each item.
 - c) Store the inventory information - Location of the stock, time the item is added, stock quantity, etc.
 - d) Price changing: A user can manually change the listing price of an item according to the Market Research Module results.
2. Order Management Module: This module is mainly used to manage the online selling status.
 - a) Transaction: It could check the details of each transaction made by customers. Including transaction price, buyer ID, checkout status, etc.
 - b) Selling Label: It could automatically list the selling label details of transactions made 24 hours before yesterday 10:00pm.
3. Market Research: This mainly focuses on market management/ market research.
 - a) Search the overall selling status of an item. For example: the information of recently top selling products.
 - b) Find out the price of similar products, and use the Inventory Management Module to change the price to optimize profit.
